

2

Select the starting frame number and click **OK**.

Begin tracking from the second frame because velocity can not be calculated for the first frame.

Choose starting point for L_.....

Frame number:

Maximum number of plots to fill simultaneously (use lower number to avoid memory error):

Go through the images and choose the 'earliest' frame that can be treated as reference to be tracked across all frames

Tracking will be done from this point onwards

If you chose single segmentation 'ref_ROI.zip' for all images, then you need to choose the frame that correspond to ref_ROI.zip

For AcTrM data, with velocity information: choose 0002.tif or later frame

For AcTrM data, without velocity information: choose 0001.tif or later frame

Increase or decrease depending on computer capacity
